26530	7590	05/02/2006	EXAMINER	
LADAS & PARRY LLP 224 SOUTH MICHIGAN AVENUE SUITE 1600 CHICAGO, IL 60604			ELMORE, REBA I	
			ART UNIT	PAPER NUMBER
			2189	

DATE MAILED: 05/02/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

10/747,846

Applicant(s)

LEE, GEUN IL

Examiner

Reba I. Elmore

Art Unit

2189

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 29 December 2003.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-12 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

1. Claims 1-12 are presented for examination.

### *SPECIFICATION*

2. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### *35 USC § 102(b)*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by
5. Sonoda teaches the invention (claim 1) as claimed including a method for masking a postamble ringing phenomenon in a DDR SDRAM (e.g., see col. 2, lines 61-66), the method comprising the steps of:
  - a) storing data, which are applied from a memory controller, in a data input latch through a data buffer and aligning the stored data (e.g., see Figure 7 and col. 3, line 10 to col. 4, line 65);
  - b) controlling the data input latch so that the data stored in the data input latch do not change (e.g., see col. 2, lines 8-26);
  - c) transmitting the data stored in the data input latch to a data input/output detection amplifier (e.g., see col. 3, lines 10-25); and,

\*\*\*\*\*

d) enabling the data input latch to receive new data after the data, which have been transmitted to the data input/output detection amplifier, are transmitted to a global input/output line (e.g., see col. 3, lines 10-63).

As to claim 2, Sonoda teaches in step b) an enable interval of a signal controlling the data input latch is adjusted so that the data stored in the data input latch do not change (e.g., see col. 4, lines 5-20).

As to claim 3, Sonoda teaches the signal, which controls the data input latch to prevent the data stored in the data input latch from changing, is generated by a signal which is synchronized with a falling edge of a DQS signal before it is generated (e.g., see col. 7, line 37 to col. 8, line 24).

6. Sonoda teaches the invention (claim 4) as claimed including a method for masking a postamble ringing phenomenon in a DDR SDRAM (e.g., see col. 1, lines 22-34), the method comprising the steps of:

a) storing data, which are applied as a signal received from a memory controller, in a data input latch through a data buffer and aligning the stored data (e.g., see Figure 7 and col. 3, line 10 to col. 4, line 65); and,

b) controlling the data input latch so that the data stored in the data input latch can maintain its data value before the data stored in the data input latch are transmitted to a global input/output line through a data input/output detection amplifier (e.g., see col. 2, lines 8-26).

As to claim 5, Sonoda teaches that after step b) a step of resetting the data input latch so as to revert to a state in which the data input latch can receive new data (e.g., see col. 3, line 64 to col. 4, line 49).

As to claim 6, Sonoda teaches that in step b) an enable interval of a signal controlling the data input latch is adjusted to prevent the data stored in the data input latch from changing (e.g., see col. 4, lines 5-20).

7. Sonoda teaches the invention (claim 7) as claimed including a method for masking a postamble ringing phenomenon in a DDR SDRAM, the method comprising the steps of:

a) receiving a DQS signal through a DQS buffer, and receiving a plurality of data, including a first data and second data, through a data input buffer (e.g., see Figure 7);

b) storing the DQS signal outputted from the DQS buffer in a DQS latch (e.g., see Figure 7 and col. 2, line 61 to col. 3, line 39);

c) generating a first signal synchronized with a rising edge of the DQS signal, and generating a second signal synchronized with a falling edge of the DQS signal (e.g., see Figure 7 and col. 2, line 61 to col. 3, line 39);

d) storing the first data from among the plurality of data outputted from the data input buffer in the data input latch synchronized with a rising edge of the first signal (e.g., see Figure 7 and col. 2, line 61 to col. 3, line 39);

e) storing the second data from among the plurality of data outputted from the data input buffer in the data input latch synchronized with a rising edge of the second signal (e.g., see Figure 7 and col. 2, line 61 to col. 3, line 39);

f) transmitting the first data and the second data, which are stored in the data input latch, to a data input/output detection amplifier, synchronized with a falling edge of the second signal (e.g., see Figure 7 and col. 2, line 61 to col. 3, line 39);

g) controlling operation of the data input latch by means of a control signal which is synchronized with the rising edge of the second signal in step e) and is then generated (e.g., see col. 11, line 17 to col. 12, line 30).

As to claim 8, Sonoda teaches operation of the DQS latch is masked while the control signal maintains an enabled state at a high level (e.g., see col. 8, line 38 to col. 9, line 32).

As to claim 9, Sonoda teaches the control signal is disabled by a data in a strobe pulse signal which enables the data input/output detection amplifier (e.g., see Figure 7 and col. 2, line 61 to col. 3, line 39).

As to claim 10, Sonoda teaches a step of providing a ringing phenomenon mask section which generates the control signal synchronized with the rising edge of the second signal; that can adjust its own delay time, thereby adjusting an enable interval of the control signal (e.g., see Figure 7 and col. 2, line 61 to col. 3, line 39).

8. Sonoda teaches the invention (claim 11) as claimed including an apparatus for masking a postamble ringing phenomenon in a DDR SDRAM, the apparatus comprising:

a data strobe buffer for receiving a data strobe signal from a memory controller (e.g., see Figure 7);

a data strobe latch for latching the data strobe signal outputted from the data strobe buffer (e.g., see Figure 7);

a data buffer for receiving data applied from a memory controller (e.g., see Figure 7);

a data latch for latching the data outputted from the data buffer and for transmitting the latched data to a data input/output detection amplifier in response to an output signal received from the data strobe latch (e.g., see Figure 7);

Art Unit: 2189

---

a ringing phenomenon mask section for controlling the operation of the data latch in response to the output signal of the data strobe latch (e.g., see col. 2, lines 8-26).

As to claim 12, Sonoda teaches the data strobe signal is a clock signal, the ringing phenomenon mask section includes means to synchronize the control signal with a falling edge of the clock signal and generates the control signal thereafter, so that data transmission from the data buffer to the data latch is masked when the ringing phenomenon mask section is enabled (e.g., see col. 9, line 10 to col. 10, line 50).

### *CONCLUSION*

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Reba I. Elmore, whose telephone number is (571) 272-4192. The examiner can normally be reached on Monday and Wednesday from 7:30am to 6:00pm, EST.

If attempts to reach the examiner by telephone are unsuccessful, the art unit supervisor for AU 2189, Reginald G. Bragdon, can be reached for general questions concerning this application at (571) 272-4204. Additionally, the official fax phone number for the art unit is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Tech Center central telephone number is (571) 272-2100.

Reba I. Elmore  
Primary Patent Examiner  
Art Unit 2189
